SUMMARY: Infrastructure Analyst focused on observability, automation (IaC) and reliability of critical systems, working with Linux, Ansible, Terraform, Docker and Kubernetes in financial-market environments.

PROFESSIONAL EXPERIENCE

Elin Duxus Consulting | São Paulo, SP

Infrastructure Analyst | February 2026 - Present

Linux | Ansible | Zabbix | Grafana | Kubernetes | Docker | PostgreSQL | Nginx | Apache | Tomcat | GitLab CI | pfSense | AWS

- Supported Linux servers for financial applications, handling incidents, monitoring and preventive maintenance to keep services available.
- Automated patch management by developing Ansible playbooks, reducing the team's manual effort by about 70% and mitigating vulnerabilities.
- Ran backup routines and disaster recovery (DR) tests on storage and databases of critical applications, with supporting scripts.
- Implemented proactive monitoring with Zabbix and Grafana (dashboards and alerts) to anticipate failures and speed up incident investigation.
- Deployed and supported containerized environments in Docker, PostgreSQL databases and web servers (Apache, Nginx, Tomcat).

Capta Tecnologia | São Paulo, SP

Technical Support Analyst L2 | September 2025 - February 2026

Python | Scripts | SQL | Log analysis | Azure

- Supported the cloud infrastructure of critical point-of-sale (POS) systems for Enterprise clients (e.g., Vivara and Tiffany & Co.), keeping sales stable during high-traffic periods.
- Designed a systemic automation in Python/scripts that increased productivity in closing technical tickets by 35%, contributing to SLA targets.
- Solved complex incidents (troubleshooting) using log analysis and SQL queries, working with Software Engineering to speed up delivery pipelines.

Infleet | São Paulo, SP

IT Analyst | February 2024 - September 2025

ClickUp | Excel | Intercom | SLA management | Technical support

- Managed technical support for a fleet management and telemetry platform, triaging and prioritizing daily software and hardware requests in ClickUp and Intercom, while tracking support SLAs.
- Acted as the point of contact between Development, Sales and Logistics to unblock requests and speed up deliveries, and ran internal technical training that increased partner teams' autonomy on the platform.

FEATURED PROJECTS

Tracking API: Cloud-Native Architecture and SRE Culture

Link: github.com/DanielMouraoti/api-rastreamento

- Developed a Python (FastAPI) API ready for cloud orchestration, focused on high performance and integration with observability metrics.
- Containerized the application with Docker, applying security best practices (non-root user) and multi-stage optimization to produce a lightweight, secure image.
- Built a CI/CD pipeline with GitHub Actions that automated 100% of the lint, build and push steps to Docker Hub, eliminating manual deploys.
- Provisioned the cluster infrastructure as code (IaC) with Terraform, reducing the risk of manual operational errors (ClickOps).
- Configured liveness and readiness probes in Kubernetes for automatic container recovery.

Microservices on Kubernetes on GCP (Terraform + GitHub Actions)

Link: github.com/DanielMouraoti/core-api-microsservicos

- Developed a Python (FastAPI) API with MongoDB, Redis caching (60 s TTL) and asynchronous processing through RabbitMQ with a dedicated worker.
- Containerized the services with Docker and orchestrated the local environment with Docker Compose.
- Provisioned a VPC and a GKE Autopilot cluster on Google Cloud with Terraform.
- Created a GitHub Actions pipeline that builds and publishes the image to Docker Hub on every push to main, with per-commit SHA tags.
- Wrote Kubernetes manifests (Deployments, Services and PVC) with resource requests/limits.

TECHNICAL SKILLS

- **Cloud / Infrastructure:** AWS, Google Cloud, Linux, Windows Server, Networking (pfSense), PostgreSQL, Nginx, Apache
- **Observability:** Prometheus, Grafana, Zabbix, cAdvisor, log and metrics analysis
- **IaC / Containerization:** Terraform, Docker, Kubernetes (Kind/Minikube), Ansible
- **DevOps / CI-CD:** GitLab, GitHub Actions, Git, Agile methodologies
- **Development / Scripting:** Python, Bash, PowerShell, YAML, Helm, REST API integration (FastAPI/Flask)

EDUCATION

Tecnólogo (technology degree) in Systems Analysis and Development - Anhembi Morumbi | Expected completion: June 2027

CERTIFICATIONS

- Oracle Cloud Infrastructure Foundations Associate
- Google Cloud Computing Foundations
- Microsoft Azure Fundamentals (AZ-900)
- Cisco Network Fundamentals Specialization

LANGUAGES

- Portuguese: native
- English: basic (A2)
